Symposium No. X of XII symposia

Dear Dr. Ford :

Jointly, the Universities of Göteborg in Sweden and the West Indies, Kingston Jamaica have organized two conferences which brought together leading experts in the fields of transmissible and non-transmissible neurodegenerative disorders. Due to the increased interest in our symposium series we have organized our third one to take place April 2-7, 1995 in Ocho Rios, Jamaica.

For the 1995 symposium Dr. Catherine Vidal, a recognized authority in the field of nicotine receptors, organized a session about Nicotinic Receptors in Neurodegenerative Disorders. Please see her attached synopsis and speaker list. She has invited leading experts to participate in this session all have agreed. However the speakers will need to be supported. In view of your interest in supporting research about nicotine we are making an humble appeal to you for support. If you are in position to assist us this symposium would be listed as being supported by the Council for Tobacco Research. For airfare and the hotel each speaker needs \$1500.

We are grateful to you for considering this request. We would also like to extend an invitation to you to attend the conference. We have enclosed the preliminary program for your reference.

I enjoyed talking with you last year at the AD/PD meeting in Chicago.

With kind regards

Sincerely yours,

Amanda McRae PhD Chair of the organizing committee
